

CYBERSEX.COM METaverse NFT GAME

WHITE PAPER V1.1

Introduction:

The Cyber Sex Metaverse is a fully erotic, immersive, three-dimensional, open world, multi-player interactive experience. Pay for play and play to earn in state of-the-art virtual environments. Custom character and celebrity avatars can be purchased or earned. The Cyber Sex Metaverse is a community-focused metaverse game in which each player uses and owns a character NFT that is individual to its owner. Every unique Cyber Sex character looks different, feels different, and has different abilities. Players use Cyber Sex characters to earn real cryptocurrency in the game via Erosa Tokens. Erosa Coin (EROSA) is the official cryptocurrency of the CyberSex.com Metaverse. EROSA Tokens can be earned by erotically engaging and or breeding with other Cyber Sex Metaverse characters.

The Cyber Sex Metaverse has its own NFT marketplace enabling users to buy and sell NFTs inside of the game. It will be one of the most advanced and unique NFT games on the market because it is built on the premise that “Immersive Erotic Gaming” will be an integral part of the Cyber Sex Metaverse community. Our sole focus for the community is to enable users to engage in virtual reality gaming experiences in an

anonymous and decentralized manner. Users can play for free and or play to earn in the most exciting adult oriented NFT game on the market.

Corporate Entities:

The Cyber Sex Metaverse was created by several development teams and business advisors. Primal Ventures LLC., Erosa.io, Internet Management Corp. and CyberSex.com. These entities share in joint ownership of the Cyber Sex Metaverse and serve as the parent companies responsible for the development and launch of this adult oriented web 3.0 metaverse project. These corporate entities have decades of experience in their respective fields and are known for creating, financing, and managing hundreds of interactive web sites and software development projects. The evolution of immersive virtual reality technology provides the perfect platform for online eroticism which may have a global impact on the way humans interact, meet, and engage with each other online.

Non-Fungible Tokens:

Every aspect of the Cyber Sex metaverse game can be owned and purchased by the community. Each NFT item is written to the blockchain. Users will be able to upgrade, trade and expand their Cyber Sex NFT collection which is made up of erotic characters, accessories, and virtual land sales. Owning a part of this NFT collection will afford its owners a lifetime membership to the Cyber Sex Metaverse gaming platform. Enabling users to engage in virtual reality erotic experiences, while earning, owning, and dispensing EROSA coin tokens within this environment.

Cyber Sex NFTs are the cornerstone for the Cyber Sex Metaverse. Each Character is randomly generated and customized by our Artificial Intelligence system. The algorithm we have built uses random variables to mix and match a predetermined set of 3D objects and items to create completely new and unique NFT characters. Each Character is fully animated and carefully escorted through our quality control and ability validation process to ensure proper balancing of its capability and rarity.

The best of our NFT character collection is earmarked by the Cyber Sex algorithm which studies our most successful Characters via our private machine learning program to improve the future output of new NFT characters. Each randomly generated NFT character includes a 3D model which is provided to its owner as a GIF and PNG image. These

characters come with specific attributes that are unique and critical for success within the game.

Cyber Sex Character Attributions:

The Predator Class, The Celebrity Class, and The Working Class.

The **Predator Class** is made up of general user NFT Characters containing several attributes which are based on the NFT 3D model itself. Height, weight, race, physical dimensions, sexual preferences, and orientation of the characters are attributes which are applied to the NFT characters during their development. Each NFT's interactive ability and portfolio of accessories can be upgraded and or customized accordingly and or as desired by each owner through utilization of their digital currency EROSA coin wallet within the Cyber Sex Metaverse Marketplace.

The Celebrity Class collection of 3d NFT avatar characters consist of numerous prolific individuals within the music, film, and adult industries. This group of high-profile social media influencers will have full body virtual image scanning performed at our corporate facilities. Their bodies and characteristics will be developed, digitally enhanced, and recreated to provide users with a fully optimum virtual experience withing the Cyber Sex Metaverse. Our celebrity lineup will interact within the Metaverse community and will be accessible to **The Predator Class** user base. Furthermore, the

Celebrity Class of users will be able to leverage millions of existing fans and followers enabling them to engage in numerous performances within a lucrative, immersive, erotic virtual, environment.

The Working Class is made up of users that will interact similarly to the **Predator Class**. The Cyber Sex Working Class will provide erotic virtual interaction, companionship and more in exchange for EROSA coin which gets applied to the workers digital wallet account. Exchange of EROSA coin will be provisioned accordingly via our Cyber Sex Metaverse affiliate tracking program. Each of these three groups will have the ability to buy or earn customized NFT characters and or land and accessory ownership within the Cyber Sex Metaverse community.

(EROSA) Coin Crypto Currency Exchange.

Exchange and earning of EROSA coin will be provisioned accordingly via our Cyber Sex Metaverse affiliate program. This currency exchange will incentivize and enable all users within the Cyber Sex Metaverse to earn, save and trade in this digital currency for goods, services, character purchases, upgrades, virtual land sales and more. This currency will be made available for trade and or purchase on several of the most popular crypto currency exchange platforms and will be available for purchase and or trade via our own marketplace. Accordingly, these coins can be traded for other currencies and

or cashed in at any given time by their owners based on the current market value.

The character models can be upgraded and enhanced as required by their owners and or based on their EROSA token earnings. These upgrades in many cases will enhance the physical characteristics of the characters functional and sexual capabilities. Furthermore, real world interactive virtual reality headsets, hardware, body suits and interactive sexual devices may all be used to enhance the user's virtual experiences. Our Cyber Sex Metaverse API has been developed to enable the NFT characters to interface with many of the most popular interactive real-world devices which already exist and can be purchased via the Cyber Sex Metaverse Marketplace. Proper calculation, balancing and interfacing with these API's are critical to encouraging an optimal, interactive, erotic experience for all users of the community.

When someone sells an NFT, the Cyber Sex Metaverse receives a 7% royalty fee as the creator of the NFT. Each time the EROSA currency is bought, sold, or traded the existing pool of EROSA coin holders will receive residual earnings as the result of each transaction. Any player who owns virtual land will receive an allocated portion of the total amount of EROSA Tokens spent in their owned environment.

Virtual Land Sales

The Cyber Sex Metaverse virtual land will also be sold as NFTs and owned by users within the community. There are several benefits to owning certain objects, areas, and environments that will be outlined as we develop. Each of the Cyber Sex Metaverse NFTs are minted and sold via OpenSea.io and will also be available through our own internal marketplace. These structures include land, popular tourist destinations, virtual cities, buildings, hotels, bars, night clubs, brothels, houses, apartments, and condominiums. The owners of these entities will enable users to interact in a private and semi-private setting within these structures. A complimentary block of Erosa Coin tokens will be earmarked, and air dropped to each owner of these virtual NFT properties. Property owners will earn royalties in the form of EROSA coin and will be able to sell adult-oriented and mainstream products, services, and advertising space within their environments. Numerous virtual land environments will be accessible from the Cyber Sex Metaverse Environment map, each of them owned by the community. Those who own virtual land in the Cyber Sex Metaverse will earn EROSA tokens from any commerce that may have taken place within these environments. Units of our Metaverse land will be made available as a first right of refusal to our community membership base. This means the existing Cyber Sex Metaverse community will get the first chance to purchase this digital land as it is produced and before it is made available to the open market. The Cyber Sex Metaverse virtual

land will be available and sold as NFTs and its ownership is registered via block chain technology. Just like in the real world, landowners can own certain areas to be built upon, rented, or subleased. As our Metaverse grows, we want users to be able to grow, build upon, and monetize the land they own as we continue to expand. Digital land sales and ownership will operate similarly to how digital structures and characters will. A significant percentage of the gross EROSA coin revenue generated from land sales will be used to make virtual land purchases across other popular metaverse environments. This will provide and ensure an endless flow of users and exposure to our infrastructure.
